## What is CQA

Task Formulation

Method

Data

Experiments

Conclusion

# Think of the last time...

... you had to search for information in a forum...

Did you find it immediately?

Did you have to read a lot of useless content?

# Purpose of CQA

Finding useful responses to questions from user-generated content.

# User-Generated Content

Lots of Information - some of it is useful

Lots of noise

Grammar, speech, expression...

Need to extract meaningful info from it

# Example for CQA

On next slides (*in Bulgarian - translation follows*)...

(From BG-Mamma - largest online forum in Bulgaria)

## Question subject

Въпроси относно камина Ерато

Враца  
Мнения: 112

Моля тези от вас, които имат такава камина да се включат с отговор на няколко въпроса:

1. Запалихте ли вече камините. Първоначално само вечер ли?
2. Какви настройки сте направили?
3. Имате ли някакво ръководство?
4. Какви пелети ползвате?

Предварително благодаря на всички 😊

Имам Пони9 на Ерато.

Днес я запалих за 2 часа.

Пелетите са български от Разлог, но имаме още 2-3 торби от тях. За тази зима сме поръчали етрополски пелети 2,5 тона.

Засега не сме настройвали нищо. Миналата година бяхме настроили да се включва сутрин в 5:30, после по някое време се изключваше, пак се включваше и т.н., но не помня подробности.

Имам книжка с инструкции.

Бухахаха 😄 ей такива смешки стават, когато пишеш през телефона. Имах предвид ЕКО РЕЖИМ 🙌😄  
Междудругото вашата камина, когато достигне определена темп спира ли работа?

Първата зима спираше, но после от фирмата, откъдето я купихме, й промениха настройките и сега не спира. Проблемът със самоизключването бе, че трябва температурата да падне с 2 градуса под зададената, за да се включи. По този начин се получаваха големи температурни амплитуди.

Prepared for processing...

And annotated...

Question Subject		Question Text
Questions about fireplace Erato		Please those of you who have that fireplace to get involved with the answer to a few questions: 1. You lit the fireplaces. Initially only night? 2. What settings have you done? 3. Do you have any guidance? 4. What pellets you use? thanks in advance to all : lol:
<b>Comments</b>		
Position	Relevance	Comment Text
1	Good	I have Poni9 on Erato. Today I lit it for 2 a.m. pellets are Bulgarian from Razlog, but we still have 2-3 bags of them. For this winter we ordered etropole pellets 2.5 tons. so far, we haven't set up any thing. Last year we were set up to turn on at 5:30 in the morning, then at some time is excluded, it still included, etc, but I don't remember the details. Have book with instructions.
2	Bad	Thanks for the reply. Have you used any ekorecim?
3	Bad	I have no idea what that is. :shock:
4	Bad	Buhahaha :D These jokes become, when you write in the phone. I meant the ECO MODE : hug: by the way your fireplace when it reaches a certain temp stops work?
5	Good	The first winter, but then stopped by the company where we bought it, I changed the settings and now I can't stop. problem with turning itself off, you need the temperature to drop to 2 degrees below the set to be turned on. Thus received large temperature amplitudes.

# Why CQA

This year, the team of FMI of Sofia University participated in the SemEval competition - task for CQA in English.

Our system achieved the best results on the main subtask.

(Data in English from Qatar Living - a large forum in Qatar)

# Goals of the Current Research

1. Existing pipeline for CQA for English - performs very well
2. Data from the largest forum in Bulgaria - BG Mamma
3. No research for CQA in Bulgarian so far

# Goals of the Current Research

1. Existing pipeline for CQA for English - performs very well

**Would applying machine translation work well for CQA for Bulgarian?**

# Content

What is CQA

Task Formulation

## **Method**

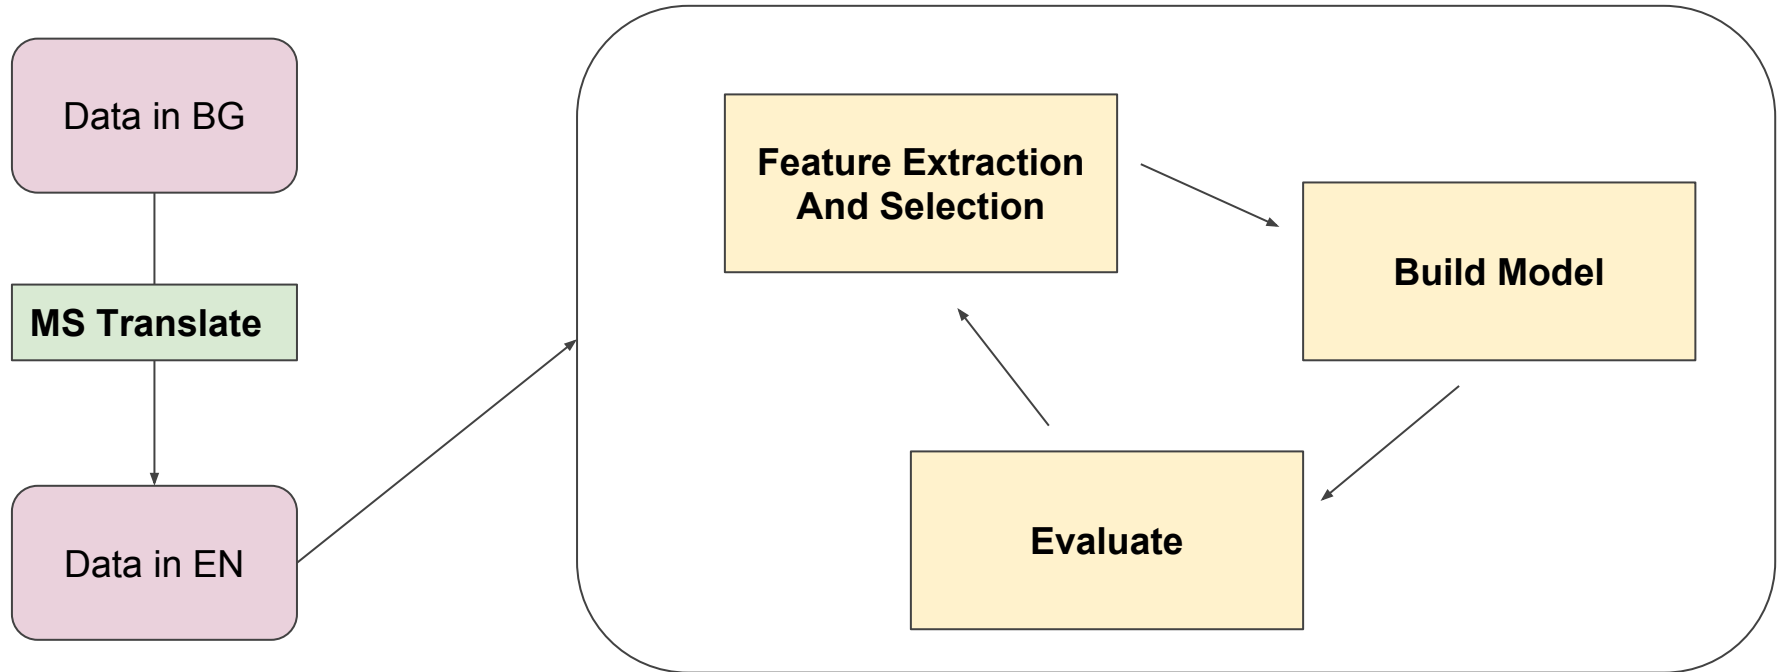

Data

Experiments

Conclusion

# How it works

# How do we know it works? (Evaluation)

Mean Average Precision (MAP)

How many good answers are put on the top positions?

The Good comments should be ordered 'over' the Bad comments.

$$MAP@5 = \sum_{q=1}^Q AveP(q) / Q$$

$$AveP@5 = \sum_{k=1}^5 P(k) / 5$$

# Classifier

Classification instances: features extracted for question-answer pair.

SVM classifier with RBF kernel.

Use **probability for Good class** as ranking score.

# Baseline

Use **1/comment position** as ranking score

MAP for baseline is ~70% on our test set

Goal: Improve this baseline with significant amount

# Features

**Metadata**

**Lexical**

**Semantic**

# Metadata Features

- Whether the comment is written by the author of the question
- Comment rank in the thread
- Ratio of the comment length to the question length (number of tokens)
- Number and order of comments from the same user in a particular thread
- Presence and the number of URLs in the question and in the comment

# Lexical Features

- Question marks and question words in question and comment
- Smileys, “thank you”, numbers
- Persons, Locations, Organizations, Addresses
- Level of readability and complexity of the text (Aluisio et al., 2010)
- POS count in question and comment
- Average number of words per sentence, type-to-token ratios
- Number of misspelled words and offensive words from a dictionary

# Semantic Features

- **Topic Modeling** is used for training of 100 topics from questions and comments from the Qatar Living training data
- **Word Embeddings** trained with Word2Vec(Mikolov et al., 2013) on the Qatar Living forum data
- **Cosine distances** between the text of the question and of the comment (distance between the sum of the embeddings of all words in the question and in the comment text)

# Content

Task Formulation

Method

**Data**

Experiments

Conclusion

# Data

Data from BG-Mamma

Topics containing “въпрос”

First 5 answers from the thread (answers with position from 1 to 5)

Annotated the answers as “Good” or “Bad” in respect to the question.

Additional training set from Qatar Living forum (from SemEval 2016).

# Data Stats

	Question-Answer pairs	Questions	Good Comments	Bad Comments
<b>Training set:</b>	250	50	84	166
<b>Test set:</b>	150	30	49	101
<b>QL train set (SemEval Train 1) - first 5 comments</b>	7055	1411	3021	4034

# How do we overcome the shortage of training data?

Domain Adaptation (Daume III, 2007)

# Domain Adaptation

Small annotated training set from one domain we need to classify

“target domain”

And large annotated set from another domain

“source domain”

# Domain Adaptation

Combine the data so that we can use a larger annotated corpus for training.

+

=

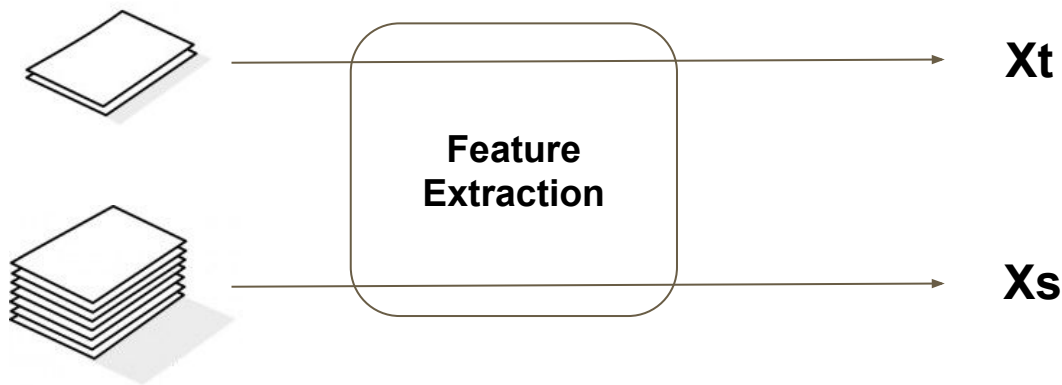

Combined Training Set

Target Domain

Source Domain

# Domain Adaptation

Extract features from source and target data

\*  $X_t$  and  $X_s$  - feature vectors for target and source domain (the same features)

# Domain Adaptation

Extend feature space

## Training Data:

- From Target Domain:  $\mathbf{X} = \{\mathbf{X}_t, \mathbf{0}, \mathbf{X}_t\}$
- From Source Domain:  $\mathbf{X} = \{\mathbf{X}_s, \mathbf{X}_s, \mathbf{0}\}$

## Test Data:

- Only from Target Domain:  $\mathbf{X} = \{\mathbf{X}_t, \mathbf{0}, \mathbf{X}_t\}$

# Domain Adaptation

Would that work?

# Domain Adaptation

Would that work?

Yes, according to research. And to our experiments.

# Content

What is CQA

Task Formulation

Method

Data

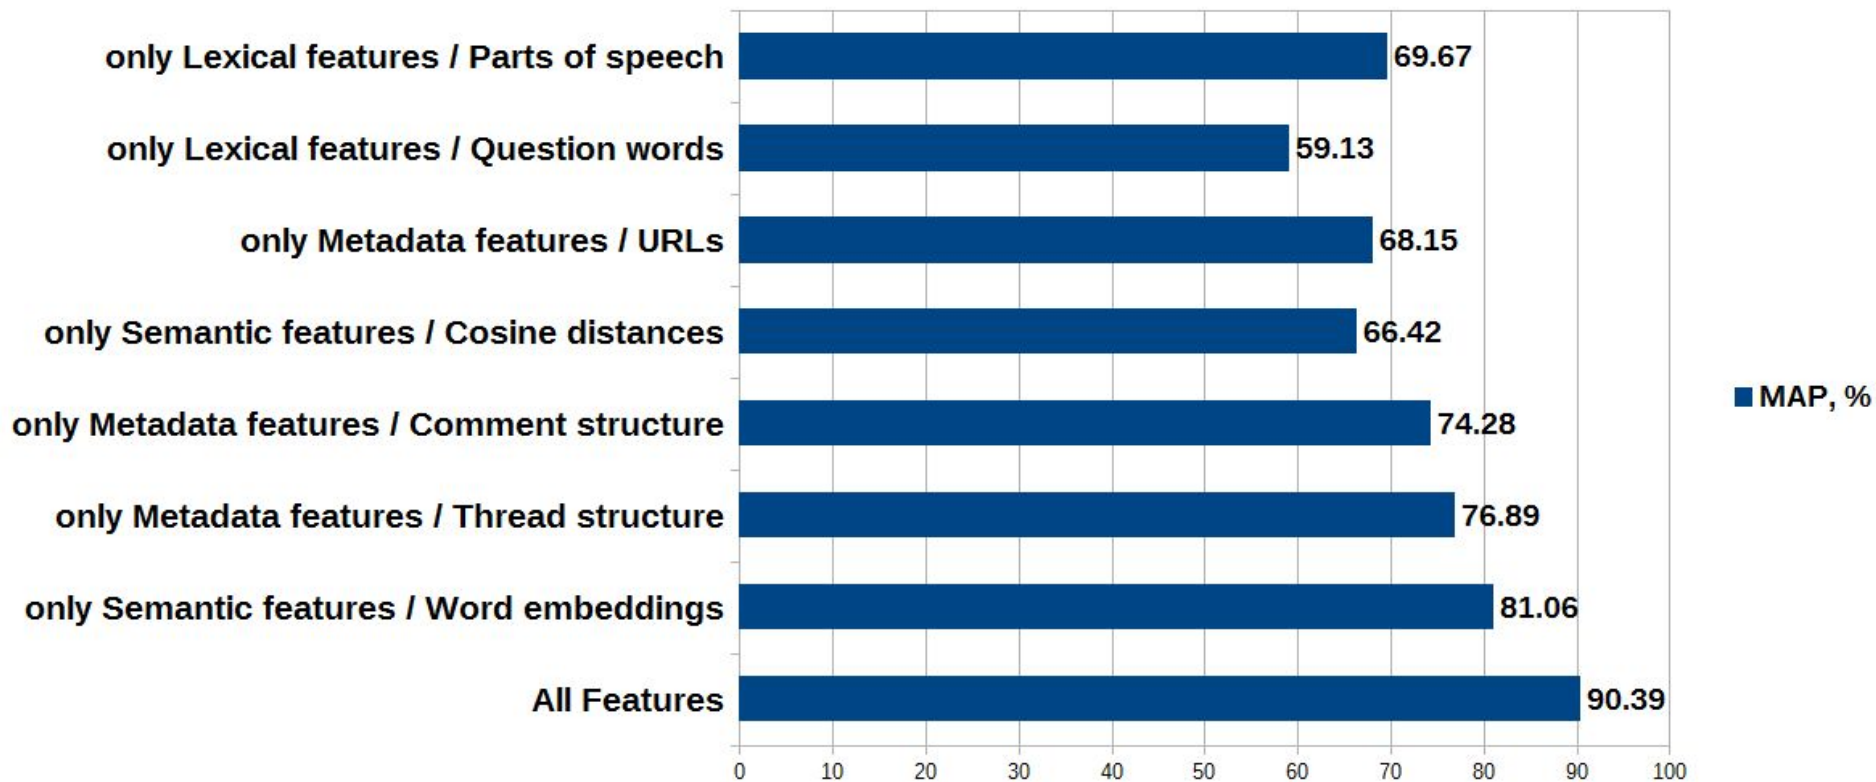

**Experiments**

Conclusion

# Experiments - Different training sets on all features

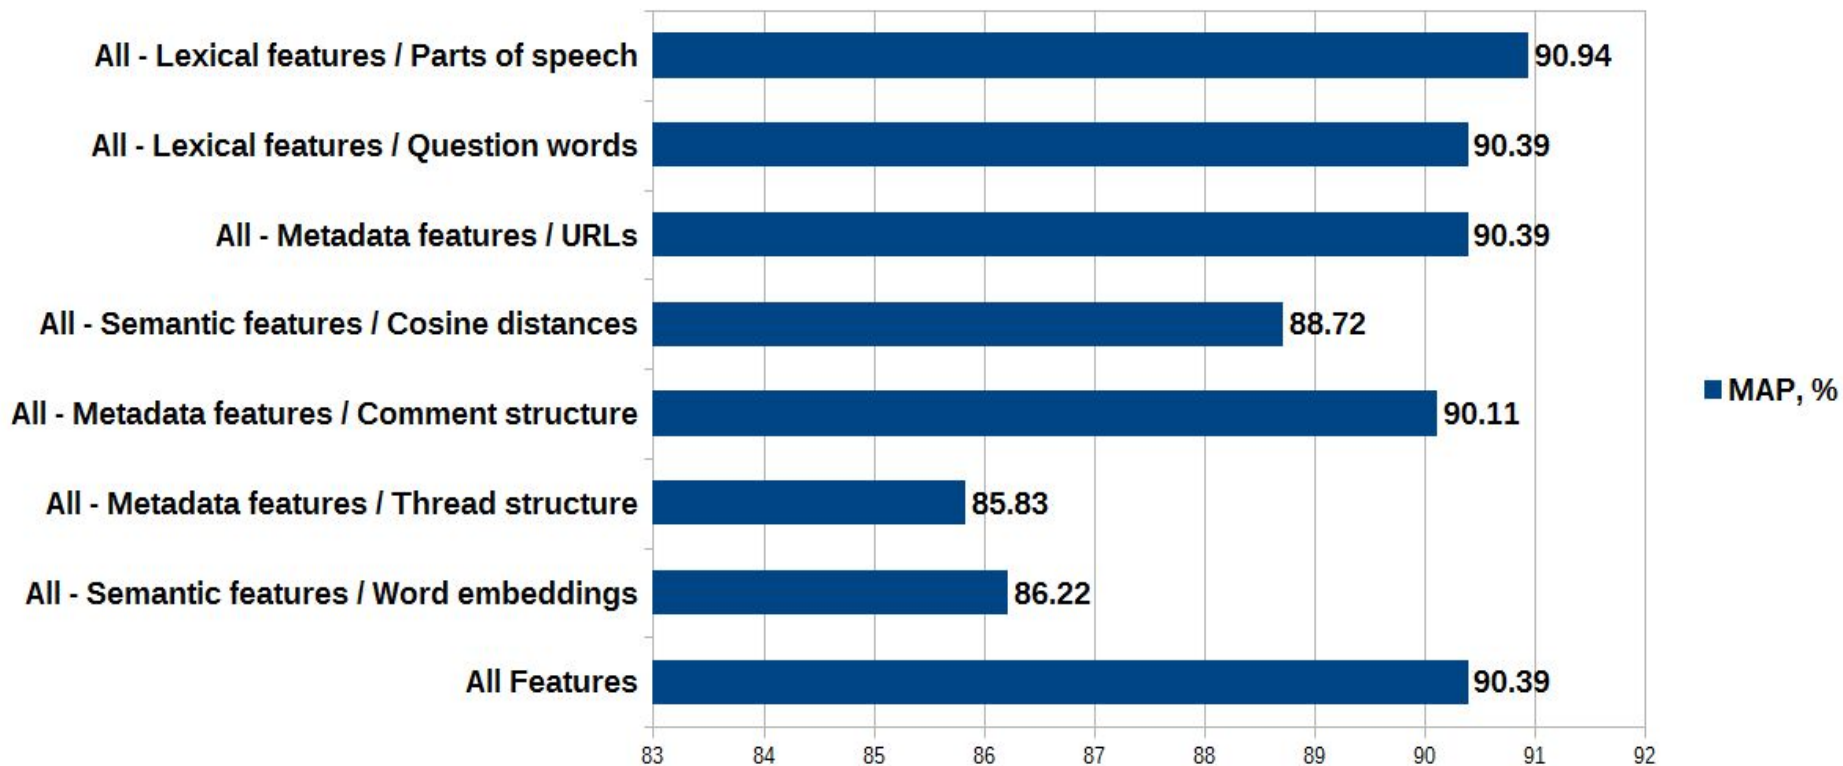

# Experiments - only specific feature groups

\* Trained on the data from BG-Mamma

# Experiments - all features without some feat. groups

\* Trained on the data from BG-Mamma

# Experiments - Results

Works **best** trained on data from **BG-Mamma** and **domain adaptation**

## Best features:

- Word embeddings
- Metadata about the thread structure

## Least significant features:

- Question words
- URLs - presence and count
- Parts of speech

# Content

What is CQA

Task Formulation

Method

Data

Experiments

**Conclusion**

# Conclusion

We presented our research for CQA for Bulgarian

1. The method of using machine translation from Bulgarian to English and using existing pipeline for English works well
2. Results are comparable to the ones tested in English
3. Achieved significant improvement over the baseline

# Conclusion

We presented our research for CQA for Bulgarian

1. The method of using machine translation from Bulgarian to English and using existing pipeline for English works well
2. Results are comparable to the ones tested in English
3. Achieved significant improvement over the baseline

**This approach can be used for further research in the field**

# Future Work

Add more features: user features, PMI, credibility

Annotate more data for BG

Publish the corpus for Bulgarian

Integrate into real-life application?

**Thank you!**
