

# Identrics

We empower the insight-driven business

Flexible integration framework for data processing and semantic analysis

- Designed to integrate numerous third-party libraries in common development environment
- Provides capabilities to build custom text mining solutions
- Based on open source pipeline designer – CCIL and open source application framework - CyberCore

## Two modes of program design

- Data processing pipeline mode
  - Data transformation and integration
  - Data store
  - Indexing
- Web services mode
  - access to the underlying processes and information resources
  - communication between disparate third-party web services

## Data processing pipeline

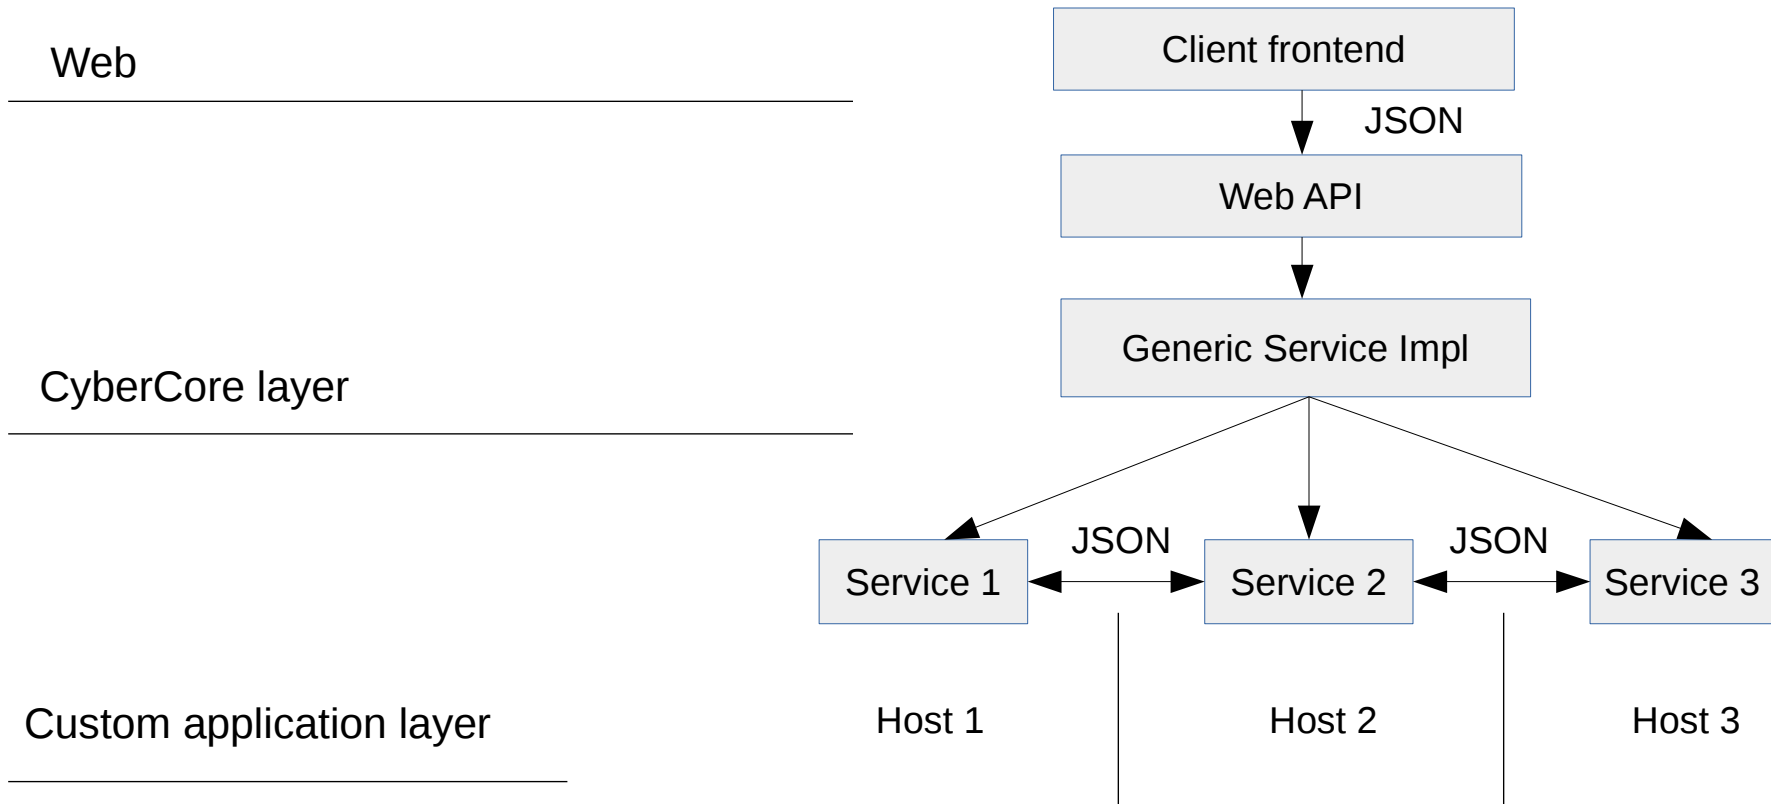

Master pipeline

Slave pipeline

## Services architecture

## Usecases

- Document similarity service for news articles
- Multi-label classification of news articles
- Named entity recognition in news articles
- Semantic data federation and LinkedData for culture inheritance domain
- Service level federation of third-party web services for data analysis

Thank you!
